

Since 2007, TamTamy has been helping businesses to design and develop the tools and practices needed to support social media.

Based on a platform which is evolving constantly, TamTamy provides the means and expertise needed to conceive and manage a customized social network.

Company

Introduce the simplicity and ability to involve people enjoyed by social media on the web to the traditional methods of communication and interaction inside companies: the result is the birth of new channels, languages and practices which add value to the business.

Relationships

A dedicated community provides an open and ongoing facility where clients, suppliers and employees can collaborate. Groups of professionals in similar fields increase their own experience through dialogue; while consumers form a relationship with the brand through social media.

Innovation

Innovation demands the highest level of participation: the generation of an idea, its enrichment with contributions from the community and its fulfillment produce an immediate, group consensus, tangible benefits and satisfaction for the individuals involved.

Events

People meet on-line and communicate in real-time to break down the restrictions imposed by the need for a physical presence. Each contribution is kept within the community. Participants and speaker are linked together from the definition of the agenda, through the event itself, to follow-up actions.

On site and SaaS

TamTamy can be installed on your company's system or can be made available as a dedicated service, taking advantage of all of the benefits of cloud computing.
