eCDR PRO — HOW OUR CO-DESIGNED DIGITAL SOLUTION WITH THE NHS HELPS PREVENT DIVERSION OF CONTROLLED SUBSTANCES

The safe custody and management of controlled drugs is essential to modern clinical care. Trusts must ensure that CDs are not subject to misuse, abuse or theft. They must comply with current UK legislation and regulations.

A number of NHS Trusts still use hand-written order books and registers to manage CDs across complex environments containing many clinical areas and locations.

This is error-prone and relies heavily on manual validation and witnessing to ensure compliance. In addition, there is no visibility of stock levels across the organisation to ensure that locations hold adequate stock at all times and the replenishment of stock often requires extra effort.

WHAT IS eCDR Pro?

eCDR Pro is an electronic Controlled Drugs System that has been specifically co-designed with an NHS Trust to help Clinical Directors & Chief Pharmacists to manage CDs more effectively across an acute setting.

The system is implemented on Microsoft's Azure Cloud platform and can be scaled to support 100s of CD storage cabinets, with 1000s users and flexible to meet the needs of future Integrated Care Systems.

KEY FEATURES:

Electronic CD Order Book requisition

Named patient, patient's own, discharge and illicit CDs
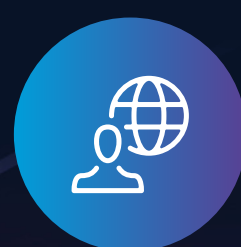

Full audit trail from pharmacy to bedside

Clean UI workflows to support Standard Operating Procedures

Improve Patient safety through integrated Incident reporting

Role-based security

Digital witnessing and requisition approval

Integration with existing pharmacy dispense and inventory systems

WHY USE eCDR Pro?

eCDR Pro helps NHS Controlled Drugs Accountable Officers (CDAOs) in the following ways:

- Ensure that controlled drugs are managed and recorded correctly in each clinical area and location

- Support safe custody across all CD locations owned by the trust

- Reduces overheads in stock ordering through integration with ePMA lifecycle

- Secure cloud solution and flexible to support needs of Integration Care Systems

- Provides insights into incident hot-spots for preventative action to be taken

KEY BENEFITS:

- Legal compliance and adherence to standard operating procedures

- Visibility of CDs across the entire organisation

- Reduced data entry errors

- Streamlined requisition and stock replenishment

- Strong evidence of approval and witnessing

- Automated incident reporting

- Simple management of practitioner roles and permissions

- Integration with other clinical systems
