MANAGING CONTROLLED DRUGS BETTER

REPLY
SOLIDSOFT

WHAT IS eCDR-PRO?

eCDR-Pro or **electronic Controlled Drugs Register – Professional**, is a digital solution designed explicitly for the NHS to replace several paper-based registers, order books and reports that are still used to comply with UK Controlled Drugs legislation today. Fundamentally the system records every transaction digitally performed by staff in pharmacies, wards and theatres using a laptop or tablet resulting in increased clinician productivity, improved governance and reduces the threat of diversion.

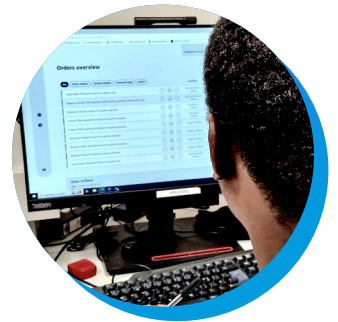

“It’s so much easier now to receive and record stock arriving on a ward as I don’t have to find and record them individually in each register which saves a lot of time.”

Nurse

“I was rung last night by a ward wanting a buprenorphine 10 microgram patch, previously I would have had to hunt through our EPMA data and rung round wards to try to locate and disturb lots of RNs and get them to check their CD cupboards who are already on minimal numbers at that time of night. With eCDR-Pro I could check and tell the ward that rang exactly where the stock was. Saving at least 15 mins of my time plus the RN time.”

Deputy Clinical Director of Pharmacy

CD WORKFLOWS MADE SIMPLE.

eCDR-Pro has over 40 workflows that have been co-designed with CDAO’s, Medicine Safety Officers and medicine teams to cater for the all the different permutations in managing Controlled Drugs effectively within a complex dynamic hospital setting. The workflows can be tailored to manage the subtle differences in each healthcare organisation. These workflows have been designed to be simple and unambiguous for everyday use by clinical staff and controlled using a comprehensive permissions framework that is also customisable.
