

Not heard of us? That's okay. We take pride in delivering for our clients rather than shouting about it. That's why we based our name around building solid software, because that's our focus. But you're here because you wanted some more information, so here's a bit about us.

WHAT WE CARE ABOUT

Connecting the dots behind the scenes to ensure that relevant data is instantly available to those who need it.

Whether it's processes, technologies or systems our engineering teams in London & Basingstoke care about helping Pharmaceutical and Healthcare organisations optimise the use of the clinical data they have to exceptional levels of quality.

All the complicated technical stuff most people run a mile from, we've been tackling for the last 25 years.

HOW WE CAN HELP

Validation, verification and authentication of clinical and pharmaceutical data throughout the supply chain

Enabling new models of care through the accurate transfer of clinical data between health organisations

Tracking and tracing of medicines and critical assets

Enabling Telemedicine solutions to scale up and safe sharing of clinical data

**WE ARE AT THE
TOP OF OUR FIELD
BUT WE'RE ALWAYS
LEARNING**

We have been working in systems integration since the early 90s, becoming published thought leaders and trusted advisors to Microsoft. So trusted in fact, that they awarded us with the first ever Microsoft Global Award for Azure Cloud solutions in 2013 as well as the 2018 Microsoft Global Healthcare Partner of the year. But we know that the industry is constantly evolving so we're always working hard to adapt to it, ensuring we're ready to deliver the best solutions available for our clients.

HOW WE HELP PROTECT EUROPE FROM THE THREAT OF FAKE MEDICINES

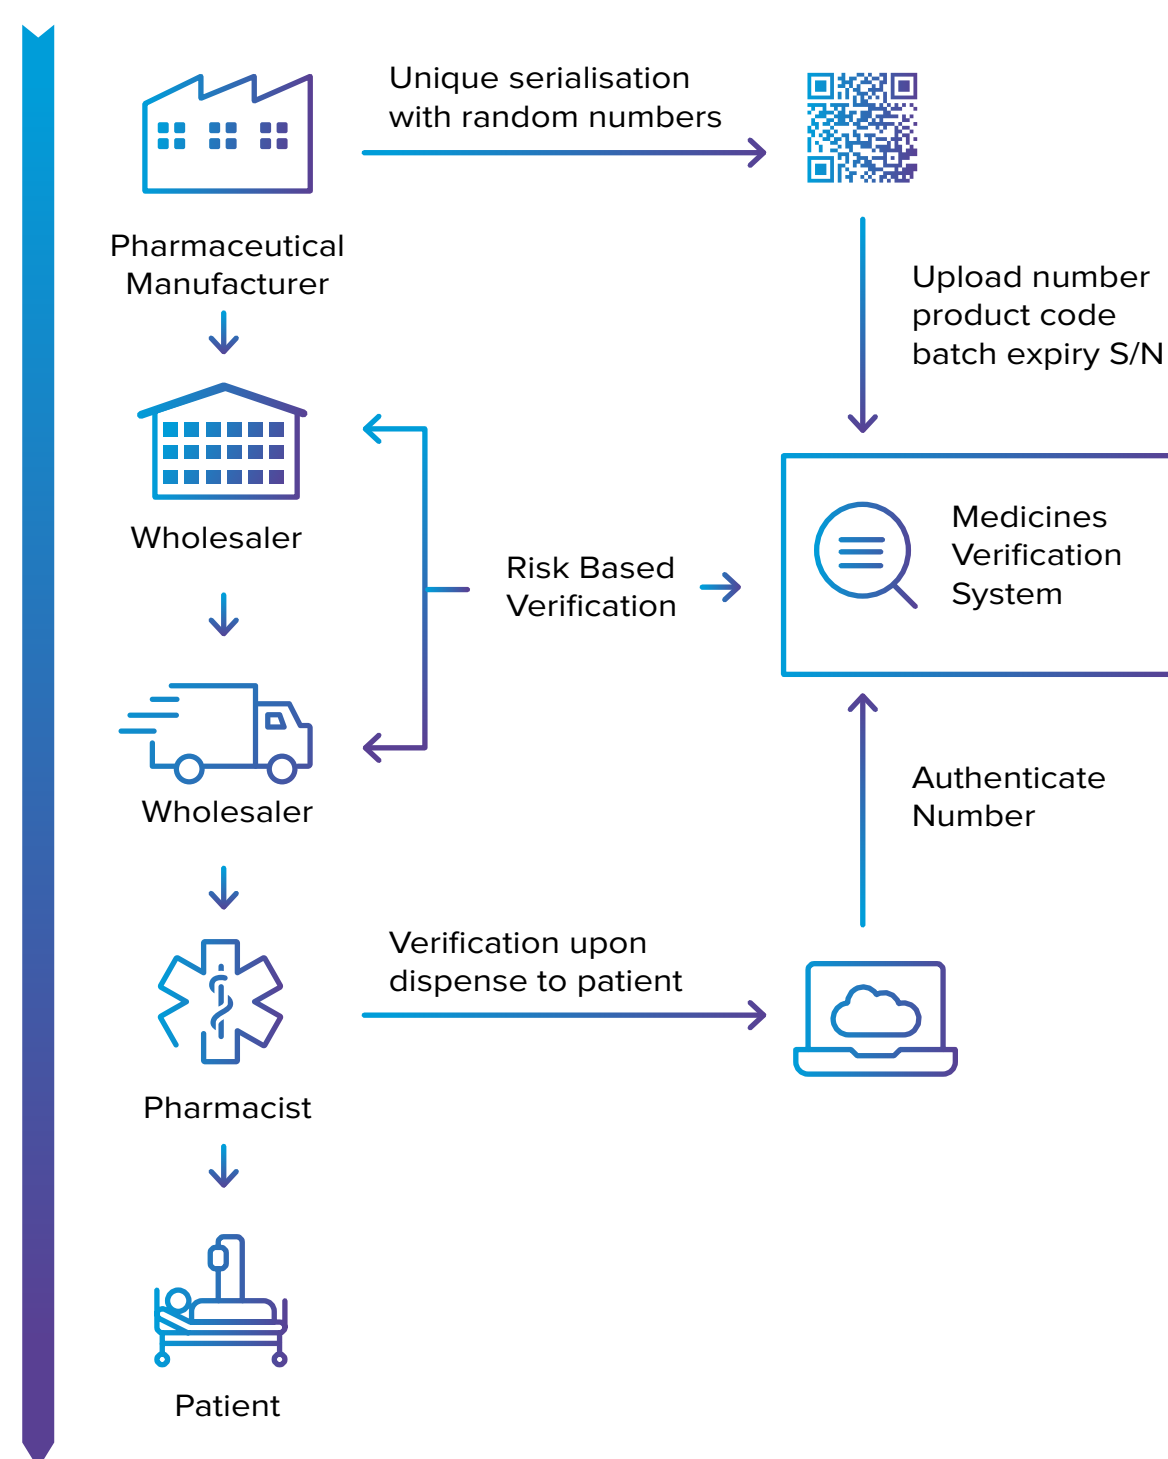

A key to delivering for clients is mastering scale. Many companies can join systems together between point A and point B and that's great, but they can also create a spaghetti of interconnections that eventually chokes your ability to move forward. True integration is a skilled engineering task.

That was the brief for the new European Medicines Verification System – how to connect over 1000+ Pharmaceutical manufacturers with every EU market and over 160,000 points of dispense?

By leveraging our partnership with Microsoft Azure, we were able to offer a unique public cloud-based solution. The solution we built is now responsible for ensuring that 10 billion medicines a year are processed at real-time, through a complex multimarket globally distributed ecosystem protecting over 600 million people.

We also hold ourselves to account to high quality engineering and have adopted Good Automation Manufacturing Practices (GAMP5) that achieve reliable high quality outputs demanded within the Pharmaceutical industry.

PRODUCT FLOW

DISCOVERY WORKSHOPS

You might want to take advantage of our 'online discovery workshops' we use to work through specific challenges, do rapid sense making and identify a starting point for any potential solutions.
