

The simplest solution to FMD compliance

On 9th February 2019, the Falsified Medicine Directive comes into force. Whether you are a wholesaler responsible for distribution, or a pharmacy responsible for dispensing medicines, VeriLite provides an easy solution enabling you to meet the regulatory requirements of the FMD.

Here's how it works

Connect your own barcode reader* to your PC or Tablet

Use your favourite browser to connect automatically to your National Medicines Verification System

Start to use VeriLite to perform all the operations necessary to meet the legal requirements of the FMD

VeriLite enables you to:

- Verify packs
- Dispense packs
- Update a pack's status e.g. destroyed, sample, free sample[†], stolen[†], locked[†]
- Reactivate a pack if required
- Mark packs as exported if they have been sold outside the EU

*VeriLite is designed to work with the widest possible selection of scanners available today. To check your scanner compatibility, visit www.verilite.eu/test

[†]Certain actions are only applicable to wholesalers.

Operating modes to suite every user and situation

VeriLite accepts product scans in a variety of different entry modes to allow you to tailor your processes with freedom.

Comprehensive reporting:

Reporting is tailored to the user and can be exported for easy integration with other products. This includes the official designated wholesaler list for each product to enable you to manage your supplier risk obligation, and a downloadable product catalogue for products in your NMVO.

Falsified Medicine Alerts:

Should you ever be unlucky enough to come across a potential falsified medicine, VeriLite will alert you. A unique alert ID code will be produced, which you can associate to the falsified pack, allowing it to be returned.
